What is Digital DNA?

Today, a company's survival is increasingly dictated by how well it leverages digital technologies such as AI, robotics, and data analytics, among other things. In order to thrive in a disruptive, rapidly changing environment, a company's internal DNA must be encoded and structured with the proper building blocks and enablers for success in this digital jungle.

We will focus on real-life examples involving businesses in Asia, which will include interactive discussions with representatives of large multinational enterprises as well as start-up companies.

Who Should Attend

Thought leaders and strategic thinkers in business, government, academia, the media, civil society and anyone else who wants to learn more about this important topic.
